

Coffee Powder Filling Machine

This machine is developed and designed for automatic powder canning machine, which is mainly aimed at ultra-fine powder which is easy to raise dust and high-precision filling requirements. according to the signals given by the weight sensor under the container, it can complete the work of two-speed filling, measurement, weighing, picking, lifting and so on, and can be matched with other equipment to form a complete set of filling assembly lines.

Features

1. The container tray is equipped with a weight sensor for fast and slow filling according to the preset weight.
2. The servo motor drives the tray to rise and fall, and the lifting speed can be set arbitrarily, and there is basically no dust to pollute the environment during filling.
3. The filling head is equipped with height adjustment device, which can easily realize various specifications of packaging.

Technical Parameters

Packing Weight	100-500g
Accuracy	<100g , <±2% ; 100-500g , <±1% ; >500g , <0.5%
Filling speed	20-30 times/minute
Voltage	AC208V - 415V 50/60Hz
Power	1.9Kw
Weight	220Kg
Dimension	1060×650×1100 mm
