

SED-100RTB-K High Speed Full Automatic Sleeve Labeling Machine

This equipment is a fully automatic intelligent packaging line that integrates bottle feeding, bottle separation, sleeve labeling and shrink labeling functions.

It is designed with real high speed, precise positioning, simplified manpower and perfect packaging. It is suitable for the outer packaging of beverages, condiments, cosmetics and other related products, and has beautiful appearance and easy cleaning and maintenance.

Feature

1. The mechanism installs a photoelectric sensor at the material tray. When the label is nearly used up, it will stop and alarm, and leave a segment of the label for the operator to connect the label; other manufacturers' equipment does not have this function, which finishes the label easily, and the operator has to load the label again.
2. The mechanism adopts dual-signal feeding, which can implement automatic switch between high-speed and low-speed or stop, thereby ensuring the stable linear speed of the label feeding, improving the accuracy of label cutting, and reducing the phenomenon of inconsistent label length; other manufacturers feed labels with single signal.

Product Parameters

Model	SED-100RTB-K
Capacity	≥10000BPH
Sleeve labeling qualification rate	≥99.9%
Voltage	AC380V, 50/60HZ, 3-phase
Power	3KW
Dimensions	2100x850x2000 (LxWxH)
Total weight	900 kg
Bottle diameter	60mm~ 120mm (can be customized)
