

Ampoules Filling Machine

The AFM Series of machines meet all the requirements for both closed and open ampoules processing.

They have been engineered with a line concept that provides a modern and ergonomic design, economy and flexibility, easy operator control.

The AFM Series can be equipped and retrofitted with various options, including:

- In-process control system
- Closing station for vials
- LAF hoods
- Integration with isolation technology

Other features:

- Easy operator control due to the slim, tidy, and clearly laid-out configuration
- All machine functions can be overseen, controlled, and operated from one position at the front side.
- Drive and production sections are neatly separated to improve cleaning and maintenance operations
- Virtually tool-free size changeovers
