

Longford Lottery Ticket Printer

Provide a custom system that reads a bar code on a stack of scratch and win lottery tickets as they come off the press. Perform a data base look up and print and apply a top sheet card (either flat or folded) and apply it to the proper stack, verify that the information on the tickets matches the printed information on the top sheet. Design, build and install a complete turnkey read/print and verify system. The system reads the bar code on the stack of tickets, tracks the stack as it travels along the parent system. At the proper time signals the feeder to dispense the top sheet into an alignment section and print the information retrieved from the customer's data base. Fold the top sheet if required and dispense the sheet onto the proper stack of lottery tickets. Verify that the printed information matches the bar code on the tickets and transfer to a shrink wrapper. The system is capable of speeds up to 200 ppm.

System Specifications:

- 1 x C700 Custom Exit Feeder**
- 1 x Alignment Section**
- 1 x Vacuum Transport Conveyor**
- 1 x Longford Custom Fold Section**
- 1 x Lake Image Verification System**

OEM Partners: Domino Printers, Lake Image Systems
