

## *Semi Automatic Flour Filling and Packing Machine CK-1*

The semi-automatic flour filling and packing machine for sale can complete the work of metering, filling, etc. Simultaneous design with weighing and filling. The flour filling machine is suitable for measuring powdery materials such as corn flour, coffee powder, bean flour, rice flour, detergent powder, milk powder, etc. And it is suitable for filling the flour into stand up pouch or other types of premade pouches.

### **Flour Filling Machine Features:**

- The machine is made of stainless steel, especially suitable for GMP certification, food hygiene certification, and packaging for anti-corrosion chemical products.
- The combined or open transparent bin can be removed and removed without tools.
- The flour packing machine for sale uses servo motor and servo drive control screw.
- PLC control, touch screen man-machine interface display, easy to operate.
- The two working modes can be switched, quantitative and real-time weighing, quantitative speed, real-time weighing and high precision.
- Touch screen man-machine interface, stable operation, anti-interference, high weighing accuracy, convenient operation and intuitive. The weight of the package can be adjusted steplessly at any time, and the working state can be changed at any time, the operation is convenient.
- The flour filling machine uses fully sealed side-opening composite box has clear materials, dust does not leak, and there is a dust suction device at the filling outlet to protect the workshop environment.

<b>Model</b>	<b>CK-1</b>
Packing weight	5-5000g (the screw attachment needs to be replaced)
packing accuracy	<±1%
Packing speed	20-35bags/min (Detailed packing speed depends on manual, packaging materials)
Voltage	3P/380V 50-60Hz
Power	1.2kw
Weight	220kg
Size	750×600×1850mm
