

JPCX105/F70B (JPCX120/F70B) Automatic Cup Production Line

Our company is a professional automatic plastic cup production line supplier in China. This production line consists of automatic feeding, PP/PS/PE sheet extruder machine, cam driven mode thermoforming machine, automatic stacker, recycling material crusher and refeed in line, which realizes producing the plastic products (like cups) from granule material directly. It is highly reduce the labor cost, production time, material waste and machine footprint.

Feature:

1. Extruder and roller are all use speed inverter.
2. Thermoforming machine use four pole structure, so that the automatic plastic cup production line can move tranquilization to advance the molding precision.
3. Synchronization control the sheet line speed and molding sending speed.

Specifications:

Model No.	JPCX105/F70B Extruder with Thermoforming machine	JPCX120/F70B Extruder with Thermoforming machine
Suitable materials	PP、PS	PP、PS
Screw size	Φ105	Φ120
Sheet thickness(mm)	0.3-2.0	0.3-2.0
Forming Depth(mm)	≤150	≤150
Max. Forming Area	680×320	680×320
Max throughput(kg/h)	300-400	350-500
Total capacity(kw)	450	465
