

Four-Side-Sealing Horizontal Packaging Machine

The four-side-sealing horizontal packaging machine uses a four-sided seal format, which highlights product branding and allows for dual-material composite packaging. This method provides a highly dustproof and sealed finish. Applications include pharmaceuticals, patches, hardware, food, and other industries. It meets modern logistics and retail standards, offering high performance and adaptability—making it the top choice for businesses prioritizing production efficiency and quality.

Features

- Side seal edge trimming device optional for clear up of side sealing burrs.
- Film feeding format option
- M plate device: Single film divides into two separated film through the wrapping process, allowed two sides to have printing design.
- Upper and Lower reels: Twin films could use with different film material (single-sided eye mark tracing only)
- Optional for peelable chevron pouch packaging.

Specification

MODEL	4 Side Seal
Operating Speed	20 - 120 pack/min
Bag Length	100 - 400 mm
Bag Width	30 - 200 mm
Product Height	10 mm
