

Automatic Cold Glue Labeling Machine SBM-LM8021CG

Automatic cold glue labeler is suitable for labeling bottles, barrels, cans, cups, hoses, cans, and other round bottles in various industries. The labeling process of paper dividing, gluing, labeling and labeling is completed automatically, which reduces the manual labeling process and improves labeling efficiency. The machine is suitable for round containers in food factories, can factories, liquor factories, general chemical plants, and pharmaceutical enterprises.

The machine is designed for round bottle labeling, suitable for all kinds of round bottle labeling. The operation of the machine starts with the sticker bar to stick the resin glue, then the label magazine transfers the label to the sticker bar, rotates and attracts to the vacuum belt through a vacuum, and then sticks the label on the bottle.

Features for automatic cold glue labeling machine

- Glue tank and stainless steel roller processing precision can never leak glue.
- The special rubber roller is processed by several processes, which are not deformed and are resistant to wear and tear. The glue application is even and light, and the amount of glue is saved.
- Use of vacuum suction label, with the belt, the label can be smoothly pasted on the bottle.
- The photoelectric sensor detects the bottle to achieve no bottle without a label.
- Using a frequency converter, the motor running speed can be adjusted freely, and the labeling capacity can be controlled freely.
- Can be operated alone or connected to the production line.
- With a manual adjustment device, easy to adjust the operation.
- By replacing a small number of parts such as the sticker bar and vacuum belt, it can be quickly adjusted and meet various specifications of bottles. And it can eliminate the human adjustment factor to the maximum extent. The adjustment of human factors can be excluded to the maximum extent.

- The whole machine has precise and delicate processing technology, and the basic parts are standard parts, which are convenient for maintenance and repair.
- The whole machine is basically imported configuration to ensure quality, making it more stable, longer use time, and low maintenance rate.

Technical Info

Model	SBM-LM8021CG
Labeling Speed	60-100 pcs per min (labeling speed is related to product size)
Labeling Accuracy	±1mm (excluding product and label error)
Bottle diameter	30-100mm
Label Size(LxH)	35-320*30-98mm
Power supply	Three-phase 380V 50HZ,or Optional
Power	Approx. 1.5kw
Air Consumption(min)	4-6kgs*18liter
Dimension(LxWxH)	Approx. 3000x1000x1200mm
Machine Weight	Approx.500kg
