

## *Glass Jar Vacuum Capping Machine YN-30*

Vacuum capping machine generally refers to the equipment used for glass bottle tinfoil capping vacuum packaging equipment. The glass bottle mouth is spiral, the cap is usually made of tinfoil, with the same number of buckles as the corresponding bottle mouth thread, according to different bottle mouth diameter standards for three, four, six buckles of the cap, respectively matching the corresponding number of spiral glass bottles.

### **Features**

1. Combined vacuum packing and capping in one machine, high automatic degree.
2. Adopts vacuum pump, so to make sure high vacuum degree.
3. The screwing torque and vacuum degree could be adjust according to demand.
4. Only need to change several parts, so to apply to different shape and different size bottle.

### **Technical Parameter:**

<b>Model</b>	<b>YN-30</b>
Voltage	220V/50Hz
Power	1500W
Max vacuum degree	-0.08Mpa
Air pressure	0.6-0.7Mpa
Screw torque	5-20N.M
Bottle cap diameter	30-85mm
Bottle height	50-180mm
Bottle diameter	30-80mm/80-150mm
Capping speed	50-180 bottles/min
Weight	180kg
