

CGF6-6-1 10 Liters Large Bottle Water Production Line

The large bottle water production line is production equipment for cleaning, filling and capping of 5L to 10L of pure water and mineral water. Because the large bottle water filling machine has introduced advanced and mature technology from European countries, it has the advantages of high automation, adaptability, convenient operation and good safety performance.

The large bottle water production lines are composed of linear washing machine, linear filling machine and linear capping machine, which has high productivity and easy maintenance.

The large bottle water production line is used for general-purpose filling of various flowable liquids in pure water, mineral water, beverage and other industries.

Parameter

Model	CGF6-6-1
Production Capacity:5000ml(B/H)	600
Machine type	Linear type
Filling volume	5L-10L
Total Power(Kw)	3
Overall Dimensions(L×W×H)(mm)	4500x1200x2300
Total Weight(Kg)	2000
