

Large Volume Parenterals Inspection

The LYNX Series of fully automated inspection machines are developed to process LVP's (Large Volume Parenterals) and infusion containers, both glass and plastic.

They represent the ideal solution to comply with GMP requirements, and to ensure that parenteral products are essentially free of foreign particles.

The LYNX Series can be equipped and retrofitted with various options, including:

- Leak testing based on the vacuum decay technology
- Cosmetic checks
- Headspace analysers
- Drying units (for plastic containers)
- Labelling heads
