

HM-200A/B Automatic Transparent Film Three - Dimensional Packaging Machine

The machine is widely used in pharmaceutical, food, cosmetics, stationery, audio and video products, electronic hardware and other industries in a variety of box-type items or a collection of automatic packaging. Such as drugs, poker, packs of cigarettes, boxed VCD, tapes, boxed napkins and so on.

1. security, dust, moisture-proof function,
2. to improve product quality and product added value,
3. to enhance production efficiency and reduce production costs.

The machine can be combined with the front end of the boxing machine box filling machine production line.

The model: according to customer requirements to increase the type

Product description:

This machine adopts the control of the human-machine interface of the product PLC, and its action is all driven by the cylinder. The lower film system adopts the motor control, which can adjust the size of the film, and has the characteristics of stable and reliable operation, strong sealing, smooth and maintenance-free. At the same time with automatic box function. The body consists of a stainless steel frame and a closed plexiglass shield. Body platform, parts are made of stainless steel, in line with health standards, beautiful appearance. Is the domestic advanced box in the package or larger items of three-dimensional packaging equipment.

Product parameters:

Model HM-200A

- Packaging speed 30-60 boxes / min
- Packaging specifications 100-300mm wide 50-160mm high 20-90mm
- Packaging materials BOPP, PVC
- Packaging material requirements Inner hole diameter: 75mm Thickness: 0.018-0.040mm
- Heat sealing temperature 100-150 °C
- Power supply 220V / 380V / 50HZ -60HZ
- Total power 4KW
- Working pressure 0.3-0.6MPa
- Integrated noise <59dB
- Dimensions 2150 × 850 × 1700mm (L * W * H)
- Machine weight 1000kg
