

## Semi Automatic Capsule Filling Machine NCB-200

NCB-200 semi automatic capsule filling machine is a processing equipment which can fill powder, granule or small piece of material into hollow capsule. This product can complete operation of capsule positioning, separation, filling and locking, thus reducing labor intensity and improving production efficiency. With novel structure, beautiful shape, reliable sensitive action, accurate filling dose, this product is welcomed by major pharmaceutical manufacturers. Touch panel and stepless frequency pneumatic joint control are combined in this product. Besides that, electronic automatic counting device is equipped to realize automation of production process, stable and reliable operation. Of course, electrical PLC programmable controller is available according to customers' needs. All parts which may come into contact with powder and capsule are made of high quality stainless steel, thus ensuring NCB-200 semi automatic capsule filling machine from rust and corrosion. At the same time, the whole manufacturing process is in accordance with GMP.

### Detailed Specifications

Productivity	12500 Pcs/h
Size of capsule	0# 1# 2# 3# Hard capsule
Power supply	380V 50Hz Four-wire Three-phase
Power	2.2Kw
Dimension	1200x700x1600mm
Weight	330Kg

As a professional medical high purity nitrogen generator manufacturer and supplier in China, we also provide flat plate blister packing machine, fully automatic capsule filling machine, capsule sorting polisher and emulsifying mixer, etc.
