

KZF-03W Vertical Trinity Machine For Unpacking, Packing And Sealing

Equipment use: It is a device that spreads the carton and spreads it out, and pushes the product from the side to pack it. This machine can automatically complete the carton unpacking, product stacking and material sorting, automatically push into the box, and then automatically seal the box with high-level automation equipment. The advantage is that it can greatly reduce labor costs and reduce labor intensity.

The client industries that are currently closely cooperating include: self-painting automatic cartoning machine, pesticide automatic cartoning machine, styrofoam automatic cartoning machine...

Technical Parameter

Dimensions (L×W×H)	3690×2850×2200mm (subject to the actual final device size)
Weight	800kg
Air source pressure	0.6-0.8MPa
Compressed air consumption	About 5L/Cycle
Input power	Three-phase five-wire system 380v/50Hz
Control power	DC24
Maximum arrangement size (L×W×H)	L(250~600)*W(220~500)*H(100~400)mm (Can be designed according to specifications)
Packing speed	5-8 cases/min (Cases/min)
Maximum tape diameter	Φ250mm
