

## *ZH-300 Mayonnaise Online Feed Bag Packaging Machine*

The liquid online feed bag packaging machine production line is mainly composed of a liquid filling machine, a bag-type packaging machine and a working platform. The assembly line pre-made bag packing machine uses a microcomputer LCD display in Chinese or English, and an advanced microcomputer chip controls the photoelectric tracking correction system, which can save manpower and material resources and improve work efficiency.

### **Main Advantages**

1. Convenient operation: PLC control and man-machine interface operating system make the operation intuitive and convenient;
2. The machine clip adopts one-time automatic adjustment with high precision, which can realize the frequent interactive production of different bags, which greatly shortens the adjustment time;
3. Suitable for different types of packaging bags;
4. Complete prevention system to ensure the yield rate, without wasting bags and materials;
5. The packaging part of the machine adopts stainless steel materials to ensure the sanitation of the materials;
6. High degree of automation: unmanned in the whole process of weighing and packaging, automatic alarm will be triggered when failure occurs;
7. Some imported engineering plastics are used, no need to refuel, which reduces the pollution of materials;

## Technical Parameters

- Packing bag material: composite film, PP, PE, etc.
- Packing bag size: W: 150-300mm L: 150-400mm
- Weight range: 5-1500g
- Packing speed: 20-40 bags/min (the speed is determined by the material itself and the filling weight)
- Packaging accuracy:  $\leq \pm 1\%$
- Air consumption: 0.3m<sup>3</sup>/min
- Power: 3KW, AC380V, 50Hz;
- Machine dimensions: 1700\*1550\*1550mm
- Weight: 1200kg
- Packing type: flat bag, three-side seal, four-side seal, zipper bag, self-supporting bag, etc.
