

## ZK-520 Continuous Stretch Packaging Machine

The automatic stretch packaging machine uses the lower film to stretch and shape, and then the package is put into the formed lower film cavity, and then the package is vacuumed or inflated in the sealing chamber, and the upper film and the lower film are heat-sealed, And then divide the package through cross-cutting and longitudinal cutting, and the finished product output of the package is automatically completed at one time. The operation is simple, which greatly reduces the labor force, improves the production efficiency, and realizes the packaging automation. It is especially suitable for batch packaging of various raw and cooked foods, chicken wings, chicken feet, soy products, condiments, meat products and other small-package materials.

### Technical Parameter

Model	ZK-520
Power supply voltage	380V 50/60HZ 3.0 KW
Packing speed	2-6 times / minute
Packaging film size	Lower film width $\leq$ 522, upper film width $\leq$ 492mm
Packing size	length $\leq$ 410 width $\leq$ 410 height $\leq$ 80mm
Machine size	6200*1400*1920mm 2100KG
