

## Viscous Liquid Filling Machine

Linear type filling machine is a straight type self flow filling machine, by controlling the time of different measurement. Ingenious design, simple structure, the replacement of different shapes of containers of different specifications, to adjust for different filling volume does not need replacement parts, the parts contacted with material using different stainless steel and corrosion resistant material, has the advantages of high working efficiency, filling accuracy, convenient operation and adjustment, and has long service life, economical and practical, filling no leakage, practical features such as.

### Application:

Widely used in food and beverage, pharmaceutical, chemical, pesticide, chemical, oil, cosmetics and other flowable liquids. In addition, can dive filling, the filling head can be inserted into the bottle filling, the filling head with special leakage-proof device, filling more secure.

### Technical Parameter:

| Name             | Hot sealing Automation viscous liquid paste filling machine |
|------------------|---|
| Voltage          | 220V/110V 50/60Hz   |
| Power            | 0.5KW   |
| Dimension(L*W*H) | 2600(L)x1500(W)x1900(H)MM                                   |
| Weight           | 750kg   |
| Model            | Two head straight paste filling machine                     |
| Air pressure     | 0.5-0.7Mpa  |
| Speed            | 50-60/min   |
| Accuracy         | ±1%   |
