

## *TFP-ZP150 Automatic Unscrambling Centrifugal Turntable Sorting Machine*

### **Product Description**

The automatic centrifugal turntable sorting machine is a common industrial equipment used to transfer materials from one place to another during the production process. This centrifugal turntable machine uses centrifugal force to feed materials along the edge of the turntable rotates and pushes the material to the target location during the rotation. The centrifugal turntable usually consists of a rotating platform and a series of guide plates arranged around the edge of the platform.

### **Product Application**

The centrifugal turntable machine is mainly applicable for food, daily necessities, chemical, pharmaceutical and other industries to arrange and array the transmission of the square, round, strip and other products. It can connect with production line or can also be manually fed.

### **Product Specifications**

Machine model	TFP-ZP150
Products application	Regular shaped candy, cookie, snack sticks, bread etc.
Main turntable diameter	800/1000/1200mm(customized)
Construction type	Internal and external double disk
Main structure	S.S304
Production capacity	Max150packs/min
Power specifications	220/380v, 1.2Kw(customized)
Machine weight	300kg
