

## *Multifunctional gear pump heating filling machine BCCRG50-01*

This machine is used for heating, filling and quantification of various viscous materials. It is suitable for different sizes of bottles, jars and aluminum plates, such as softener, eyeliner, lipstick, lip balm, lip oil, etc.

### **Features:**

- It is small in size and easy to operate.
- It is equipped with human-machine interactive operating system.
- Three kinds of filling modes are for different products.
- The filling system adopts gear pump to circulate the material supply to ensure the uniformity of the material.
- It can be equipped with raw material heating conveying system to ensure higher quality of product filling appearance.
- It can be equipped with a freezing cabinet to cool the products faster and improve the production efficiency.

Technical Parameters:

Model	BCCRG50-01
Capacity	20~50 Bottles, jars, aluminum trays/minute
Power	2.5Kw
Voltage	110/220V 50/60Hz
Air pressure	0.6~0.8Mpa
Weight	300KG
Appearance size	L:800mm W:500mm H:1500mm
