

JGX-150 Side Rotating Capping Machine

Side rotating capping machine

Mechanical characteristics:

1) The core axis capping machine overcomes the drawbacks of traditional capping machines where one bottle cap is paired with one capping head.

This model has a novel and unique design, intelligent electronic torque control, and is very easy to operate and adjust,

The fastest production speed can reach 180 bottles per minute.

It can be used for both offline production and online production, making it an ideal model.

All sizes of bottle caps with diameters ranging from 5mm to 90mm are suitable.

2) The body material is made of SUS # 304 stainless steel, which never rusts and complies with GMP pharmaceutical standards.

3) The data can be adjusted and upgraded, and it can maintain stable operation even under 24-hour overload and unstable power supply. Users can avoid it

The cost of frequently replacing components.

4) The appearance of the model is beautiful and suitable for single machine use or assembly line.

Model specifications:

- Operating voltage: AC210V~230V
- Equipment current: 5A
- Equipment power: 1200W
- Range of screw cap: Φ 5mm~90mm
- Cap rotation speed: Max.200bottles/min
- Equipment size: 2500mm in length, 1100mm in width, and 1900mm in height (adjustable width and height)
