

DPP-80 AL-Plastic Blister Packing Machine

This machine can continually and automatically complete the packing proceedings, is blister cap form-taking, medicine-feeding, heat sealing, printing lot no, and cutting into format. It has advantage as compact structure, full function, gear wheel working, and accurate Synchronization, stable cooperation, easy to replace the mould, low cost and needn't to equip Auxiliary unit. Turn on power and connect it with cooling water, you can produce in a large scale.

The machine is widely used in the vocation of medicine, foodstuff, electron, hardware for Alu/PVC blister packing of various nubby objects, such as capsule, tablet, pill and electronic Part.

Features

- Variable frequency speed regulating, PC circuit control panel.
- Adjustable travel adopts manipulator grip equipped with inching device, which has accurate Synchronization.
- Travel-type feeder is suitable for feeding capsules and tablets.
- Mould spout location is convenient for replacing mould.
- Exquisite machine is suitable for small-scale production and laboratory.

Technical Parameters

Model	DPP-80
Punching frequency	20-40times/min
Capacity	2000 plates/ hour
Max forming area and depth	70×100×12mm(designed according user's requirement)
Standard Plate	80×57(designed according user's requirement)
Adjustable scope of travel	30-80(designed according user's requirement)
Air-compressor	0.6-0.8Mpa
Total power	380V/220V 50Hz 1.8Kw
Main motor power	0.75Kw
PVC	0.15-0.5×80mm
PTP	0.02-0.035×80mm
Dialysis paper	50-100g×80mm
Mold cooling	Use of water cooling or chiller cooling
Dimensions	1400×460×950mm(L×W×H)
Weight	450Kg
Noise indicators	≤75dBA
