

YT-90 Lipstick Filling Machine

This machine is suitable for the filling of cream and paste products such as lipstick and lip gloss etc. Twelve filling, finished filling instantly. It is certain to meet.

Structure & Performance

- 1、 Machine adopt heavy-aluminum material which confirm to mechanic principle, the appearance is beautiful after careful design.
- 2、 Stainless steel (316) material barrel with two jackets (both polished) separate oil heating. The material barrel adopts mixing and temperature control.
- 3、 Filling part adopt mechanical movement, advanced motor make the machine filling with high precision, revolving angle reach 0.02 degree.
- 4、 Fully-auto control system, simple human-computer interface make operation easier. As for heating aspect, adopt high -tech temperature control system which simultaneously control 20 units of temperature, acid troublesomeness and compels of single control, this bring stable and excellent heating system.
- 5、 All adopt compressed air as the control, so they are quite suitable for the use in the request of anti-explosion environment, has high safety.
- 6、 Does not occur the phenomenon of static electricity, the leakage of electricity and no need to connect the ground wire
- 7、 All adopt pneumatic control besides hardware positioning, so they have high filling precision as the precision can be controlled within 0.5%.

Technical Parameter:

Dimensions : L850mm*W750mm*H1905mm

Power : AC380V/3 ψ /50Hz

Total Power : 3.5KW

Compressed Air : 6KG/cm²

Filling Quantity : 1~14ml/branch

Bowl Capacity : 20L, Double lip oil drum grease heating

Production Speed : 8s/module

Filling Accuracy : $\pm 1\%$

Face Height : 620mm

Heating Power : 3.1KW
