

## *Vegetable Vacuum Packing Machine CK-DZ400-2*

The vegetable vacuum packing machine works in turn by two vacuum chambers, which significantly improves work efficiency. The vacuum working chambers of this series of vacuum packing machine for sale are all made of stainless steel, with reasonable structure, good air tightness, beautiful and durable, and meet the requirements of food hygiene and anti-corrosion.

For different packaging materials and packaging requirements, there are adjustment devices such as vacuum degree, heat sealing time and heat sealing temperature, which are convenient for users to make selection and adjustment to achieve perfect packaging effect.

### **Vegetable Vacuum Packing Machine Effect:**

In addition to oxygen removal, vacuum packaging has the functions of pressure, gas barrier, and preservation to more effectively maintain the original color, aroma, taste and nutritional value of the food.

### **Features of Vacuum Packing Machine for Sale:**

- The vacuum chamber and platen of the machine are made of food grade 304 stainless steel. In order to prevent deformation, after special strengthening treatment, it will not be deformed for long-term use.
- The shape is designed with a circular arc, which is beautiful and clean. The frame is made of Swiss imported laser cutting technology with high precision.
- The vegetable vacuum packing machine control system uses a computer board, waterproof, anti-steam, Schneider control switch. The waterless reinforced heating system independently developed by our company automatically tightens during the heating process, and the life of the heating strip is prolonged, which reduces the replacement frequency of wearing parts.
- Large vacuum chamber, low energy consumption, high vacuum, and can be equipped with an external large pump to improve work efficiency and reduce the damage rate of fruits and vegetables.

○ This vacuum packing machine for sale uses packaging materials with excellent barrier properties and strict sealing technology and requirements to effectively prevent the exchange of package contents.

### **Use of Vegetable Vacuum Packing Machine:**

This machine is suitable for vacuum packaging of many types of products such as vegetables, fruits, frozen products, fresh meat, corn, tea leaves, fish, chicken, etc. It can prevent oxidation and mildew, anti-corrosion and moisture-proof, quality preservation, preservation and prolong the storage period of products.

<b>Model</b>	<b>CK-DZ400-2</b>
voltage	220V, 50-60Hz
power	2.0KW
workroom size	500X450X110mm
sealing length	400X10mm
sealing speed	1-4pec/min
weight	200kgs
external size	1350*750*950mm
