

Supply Double Chamber Tea Bag Packing Machine LGYD-12

Double Chamber Tea Bag Packing Machine is made in China and have been well received at home and abroad since entering the market.

Double chamber tea bag packing machine is an automatic tea packaging machine, which can automatically complete a series of operations such as bag making, measuring, sealing, coding and automatic counting. The machine structure is simple, the operation is simple, is our designer through the customer feedback, combines the advanced technology to re-launch a new machine.

Double chamber tea bag machine has improved greatly in performance and speed. The machine adopts the measurement of volumetric cup, the error can be controlled within 1%, and the accuracy can be greatly improved.

Advantages Of Double Chamber Tea Bag Machine

1. When there is no wire or packaging material, the machine will automatically issue an alarm to remind the operator.
2. Double chamber tea bag packing machine is equipped with protection measures such as leakage protection, short-circuit protection and overload protection, which can effectively detect the running condition of the machine, timely detect the faults of the machine and reduce the occurrence of accidents.
3. When an emergency occurs, the operator can use the emergency button to prevent the machine from working and ensure that no dangerous accidents occur.
4. The whole machine adopts PLC control system, which coordinates the operation process, making the packaging process more orderly and effectively reducing the packaging time of packaging books and swords.
5. The temperature setting and control of the heating parts of the machine are very simple, which can control the packaging temperature more accurately and make the packaging effect more beautiful.

6. The output chute count set by double chamber tea bag packing machine and the control of box packaging are simple packaging inspection methods, which can effectively reduce the waste of raw materials.

7. The memory function of double chamber tea bag machine can ensure the fixed length and cutting point of the package, making the package more exquisite.

Technical Data:

Model	LGYD-12
Filling Range	3-10 ml
Bag Size	Filter paper 87mm Length of bag 155mm
Capacity	40=80 bag/min
Weight	320 kg
Dimension	600*790*1780 mm
Power	220v/50Hz/1.5kw
