

## V-Type Blender

The rotating shell V-Type blenders are used only for dry mixes and have no packing glands (seals) around shafts entering the chamber to cause potential problems. Modifications such as the addition of baffles to increase mixing shear have been made to these types of blenders.

### SALIENT FEATURES

- Minimal Attrition when blending gargle granules.
- Large-Capacity equipment available.
- Easy to load and unload.
- Easy to clean.
- Minimal maintenance.
