

FG Cap-rolling machine

This machine is intended for capping bottles of infusion solutions. The equipment comes with a high-power generator of electromagnetic waves for complete set caps, which reduces the labor intensity. In addition, the device provides high performance by smooth and continuous operation of bottles available.

This machine is intended for capping bottles of infusion solutions. The equipment comes with a high-power generator of electromagnetic waves for complete set caps, which reduces the labor intensity. In addition, the device provides high performance by smooth and continuous operation of bottles available.

Our company is a professional Chinese manufacturer and supplier of machines for capping bottles. We also offer a capping machine for glass bottles, co-extrusion line for the film production of Non-PVC, labeling machines for bottles and more.

Main Technique Parameters:

Type	FG6	FG10	FG16	FG20
Specification	50ML 100ML 250ML 500ML			
Production Ability	20-120bottles/min	60-200 bottles/min	200-450 bottles/min	200-600 bottles/min
Quantity of rolling	6	10	16	20
Capacity	3.0kw	3.0kw	4.0kw	5.0kw
Overall size(m ³)	3000*1050*1750	3000*1200*1750	3000*1350*1750	4000*1500*1750
Net Weight	1200kg	1500kg	1800kg	1800kg
