

NJP 400/800/1200 Series Automatic Capsule Filling Machine

NJP 400 NJP 800 NJP 1200 automatic hard capsule filling machine is designed for filling hard capsules with powder/granule size 000, 00, 0, 1, 2, 3, 4 capsules, (or called 000 capsule filling machine, 00 capsule filling machine , capsule filling machine 0). 0.00 means capsule size. Widely used in pharmaceutical, medical and chemical industries (powder, granules, tablets), also can be used for filling vitamins, food, animal medicine, etc.

- NJP series fully automatic capsule filling system, which provides automatic control of capsule opening and closing, which is safe and convenient.
- The capsule equipment is equipped with a gate control safety system and a mechanical failure safety system, which provides automatic alarm and shutdown functions.
- The flat cams of the capsule filling machine operate in double rail mode, where the two axles come out separately. This allows you to increase the accuracy of work and at the same time eliminate the possibility of collision of the lower die with the metering disk.
- The high-precision cam divider of the capsule filling machine adopts optical dividing head made by German Zeiss. The high precision of the cam divider also ensures a longer service life of the machine.

Technical Parameters:

Model	NJP-400	NJP-800	NJP-1200D
Performance	24000 pcs. at one o'clock	48000 pcs. at one o'clock	72000 pcs. at one o'clock
Dimensions	980×710×1880 mm	1060×860×2030 mm	1180×1000×2140 mm
Fits	for the production of powder, granules, tablets		
Capsule size	00,0,1,2,3,4,5# safe capsule A-	00,0,1,2,3,4,5#	00,0,1,2,3,4,5#
Filling percentage	Empty capsule 99.9% Filled capsule 99.8%
