

SD-HS-23 Double Door Oven

The double-door oven (double wall oven) SD-HS-23 is a kind of electricity heated machine that of hot-wind cycling style. It is mainly used for the drying and sterilizing of bottles, vial, aluminum lid, pastern tuck and vessel.

The box body of the oven made in our company is designed under the requirement of GMP standard, and there are temperature-measuring points both under and above the oven and also at the mouth of the wind.

Feature:

1. This oven can reach to the purifying standard of 100 grades.
2. The heating pipe of the machine is made of stainless steel, which can ensure the low temperature drying and sterilization.
3. There is go-cart tray for the machine making things go in and out easy.

Specifications:

Temperature in the oven	$\leq 350\text{ }^{\circ}\text{C}$
Temperature difference in the oven	$\pm 1.5\text{ }^{\circ}\text{C}$
Wind capacity of the circling wind machine	1000-1400 m ³ /h
Wind pressure	500Mpa
External size	2200 × 1400 × 1800mm
Internal size	1700 × 1200 × 1200mm
Note: we can produce all kind of sizes which are suitable for their requirement
