

QDXGZ-1 Automatic Single Head Bottle Capping Machine

The automatic capping machine offers extreme flexibility. It can be purchased with a single capping head or with up to four capping heads to increase speed and productivity. The automatic screw capping machine features a touchscreen display and easy to navigate menu. It displays real time production information, including the number of caps it has tightened and the production rate in bottles per minute. All program adjustments are at your fingertips to provide you with complete control over the capping machine. Capping programs can be saved and stored for future use.
