

KNV01 – Modular Belt Conveyor

The KNV01 is a modular belt conveyor designed for reliable product transportation and flexible integration within packaging and production lines.

Engineered for durable industrial operation, the system supports customizable conveyor configurations, adjustable speed control, and multiple belt material options according to production requirements.

Features

- Modular belt conveyor design
- Constructed from AISI 304 stainless steel
- Available with high-durability plastic or stainless steel modular belts
- Integrated geared motor drive system
- Adjustable speed control system
- Customizable conveyor width according to production line requirements
- Motor power configuration according to conveyor length and application
- Straight or curved conveyor configurations available
- Suitable for integration into various production line layouts
- Compact and durable industrial design
