

SILVER - Automatic Bottle Filling and Capping Machine

The SILVER filling and capping machine meets most requirements of filling liquid products, in different viscosity levels, such as: syrup, oil, sauce, ketchup and more.

The SILVER model is versatile, allowing filling a variety of bottles in different shapes and sizes, according to customer's requirements.

The advanced filling unit that was designed for this model can deal with thick and non homogeneous products including products that contain pulp.

The filling unit can also sustain products with hot temperatures up to 95°C/203°F when needed.

The machine is very easy to operate and dismantle for everyday cleaning. It can be adapted to corrosive environmental conditions when needed.

The SILVER series is highly recommended for the food, cosmetics and chemicals industries.
