

Groove Mixer (Horizontal Ribbon)

CH series Groove mixer is used for mixing power or damp raw material, make the different proportion of main material mixing, widely used in pharmaceutical, food, chemical industry, and electronic industry such as dry powder mixture. Groove mixer in contact with the material are made of stainless steel blade and barrel body, small gap mixture no dead Angle, there are seal on both ends of the stirring shaft, can prevent diarrhea, material hopper adopts inching control buttons, easy to discharge, especially suitable for high uniform requirements, material proportion difference of material blending.

Feature:

CH series Groove Mixer trough mixing machine has compact structure, simple operation, good appearance, cover an area of an area small, easy to clean, good mixing effect, etc.

By mechanical mixing machine unit rotation, make S type impeller rotation, reciprocating turn, promote material mixing, operation adopts electric control, can set mixing time, automatic stop, then to improve the quality of each batch of material mixed.

Technical Parameters:

Model	CH-50	CH-100	CH-200	CH-300	CH-500
Working volume(L)	50	100	200	300	500
Mixer speed(rpm)	24	24	24	24	24
Mixer power(kw)	1.5	2.2	4	5.5	7.5
Pouring machine power(kw)	0.55	0.55	0.55	0.75	2.2
Machine size(mm)	1200*500*	1400*580*	2300*750*	2700*850*	3100*950*
L×W×H	950	1000	1350	1500	1750
Machine weight(kg)	320	350	450	520	750
