

## ***SP-260E Pharmaceutical Block Automatic Packaging Machine***

### **Main feature:**

1. Compact and reasonable structure, stable and advanced performance, easy to operate and easy to understand.
2. Dual-frequency motor control, stepless speed change, the bag length is set and cut, no need to adjust the air, one step, save time and film.
3. The use of internationally renowned electrical components, PLC control, man-machine interface, parameter setting convenient and quick.
4. The troubleshooting tips are clear at a glance and are more user-friendly.
5. High-sensitivity photoelectric eye tracking, making the seal cutting position more accurate.
6. Accurate temperature setting, suitable for all kinds of packaging materials, improves sealing quality.
7. With positioning stop function, non-stick knife, no film.
8. The transmission system is simple and clear, the work is more reliable, and maintenance is more convenient.
9. All the controls are implemented by software, which facilitates the adjustment of functions and upgrades of technology and can meet the production needs of different periods.
10. Dispensing plate automatic feeder device can be suitable for automatic blanking of various specifications of aluminum plastic plate.

**Performance parameters:**

Production capacity	30-150 (packs per minute)
Packing size	(60-190) x (30-110) x (5-40) mm
The maximum film width	250 mm
Power Supply	220V/50HZ, 2.4KW
Total weight	700 kg
Dimensions	3350*1800*650 mm
