

## Milk Bottle Filler

The Milk Bottle Filler is designed to fill milk or milk beverages into bottles, so the following process can cap the filled product. It is suitable for glass bottles and plastic bottles, and has a linear piston pump filling structure, the machine can fill bottles accurately and quickly. Its structure is simple and reliable, controlled and operated by PLC and touch screen panel, making it easy to operate, maintain and clean.

### Features:

- We use Milk Bottle Filler made of high quality materials (such as SUS 304 stainless steel), so this machine is very durable and beautiful in appearance.
- We have applied PLC and touch screen control system on the machine to make it easy to operate on the panel.
- The Milk Bottle Filler can adapt to different shapes and sizes of bottles, switching is simple and fast, making you more flexible in production and products.
- The machine's advanced control system prevents it from applying non-bottling and automatic counting functions.

### Technical parameters:

Filling heads	6 heads (can be customized)
Filling volume range	250ml-500ml (can be customized)
Producing capacity	2400~3000 bottles per hour
Power source	380V 50Hz
Power	≤2.0kw
Air source pressure	0.4-0.6MPa
Weight	700kg
Dimension (L/W/H)	1850/1150/2200mm
