

## *DC-638-558 Fully Automatic Hose Filling and Sealing Machine*

Suitable for plastic and composite tubing packaging.

Operating process: feeding → alignment → filling → heating → sealing (printing) → cutting → discharging. Fully automated.

Modular filling unit, easy disassembly and cleaning, accurate filling volume, simple adjustment, upward filling, preventing bubble formation.

- Cut-off filling head, preventing drawing.
- Using a precisely designed heating head, the inner wall of the soft tube is heat-sealed and then sealed.
- Single-sided or double-sided printing is possible.
- The hopper is connected to the machine using a hygienic fixed clamp, making it easy to disassemble and clean.
- The entire machine is made of sanitary-grade stainless steel.

Technical Parameters

Model	DC-638-558
Machine Type	Mechanical Transmission
Machine Dimensions	2000x1160x2100
	Length x Width x Height (unit: mm)
Tube Diameter Range	13-50mm
Tube Length	Maximum 230mm (including cap)
Filling Speed	30-65 tubes/minute
Voltage	220/380V, 8KW, 3-phase
Hopper Capacity	45L (Customizable according to needs)
Applicable Tube Materials	Plastic tubing, composite tubing
