

SED-4000SZH-H Double Cone Pharmaceutical Food Powder Mixer Machine

Double-cone mixer is a commonly used product type of mixer. It transports powder or granular materials into double-cone container by vacuum or manually. With the continuous rotation of the capacity, the material performs complex impact motion in the container to Mix evenly. The use of double cone mixer can effectively save energy, and it is easy to operate, low labor intensity and high work efficiency. It is an ideal equipment for material mixing.

Features

- This machine has the advantages of simple operation, uniform mixing, feeding can be equipped with vacuum suction device. The machine can also be based on user requirements set up a forced mixing mechanism, can be fine powder, the material after the clot or more than two kinds of powder and some water containing materials can be mixed. The other can trace phases and additives can also achieve the mixing effect (refers to only small amount of mixing the ingredients).
- This machine is made of stainless steel butterfly valve, which is convenient for loading and unloading and cleaning. The tube material is made of stainless steel, the inner wall is smooth and clean, no dead angle, easy to clean, avoid mixing medicine,
- Accord with the production and quality control of drug (GMP). The mixing equipment uniform coefficient of variation is less than or equal to 4% degrees.

Product Parameters

Model	SED-4000SZH-H
Total volume (m3)	4.0
Capacity (kg/batch)	800
Mixing time (min)	6-10
Rotate speed (rpm)	7.8
Motor Power:	11
Weight (kg)	3200
Overall size (L*W*H) (mm)	4750*2500*3680
