

CFH SERIES

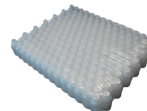

CONTINUOUS MOTION FORMING HEAD MACHINES

Polypack's CFH series machines are high speed continuous motion total closure shrink wrappers that use a forming head to multipack a variety of products. The shrink bundles are sealed on both sides and shrunk for increased product protection. Total Closure multipacks are much more resistant to mishandling and warehouse conditions, and they present a nice, continuous surface for retail packaging applications.

POLYPACK'S CFH SERIES

machines are designed to provide complete enclosure of bundles with polyethylene or polyolefin. These machines can also be designed to handle print-registered film for retail packaging. These high speed machines are available at speeds of up to 70 cycles per minute, and are available in both horizontal and vertical sealbar configurations. For round products, Polypack also offers an integrated label-orientation system for shelf-ready packaging that engages consumers head-on.
