

## *SP-15L type Automatic Suppository Production Line*

SP-15L type automatic suppository production line is suitable for the production of special shape such as bullet head shape, duck mouth shape and other shapes, which satisfies the production of various suppositories. (according to the specifications of the mould according to the requirements of the customer).

### **Feature:**

- Using inset filling, accurate in position, non-dribbling drug, non-hanging wall and high precise in counting.
- Be wide in suitability, can be used to fill high gluing degree gelatin group and the traditional Chinese medicine ware.
- Using PLC written formula control and industry grade person-machine interface operation, possessing characteristics of high degree automatization convenience in adjustment high precise thermo-control reliability in action and steady in running etc.
- Having big volume storing fluid vessel, laying homoeothermic stirring and fluid surface auto control assembly.
- Relieving worker's physical labor strength for lower position of filling drug fluid, laying cycling to supply fluid and keeping thermos equipment of channel pathways, and it will ensure drug fluid not be coagulated when machine stop.
- Small area occupied, easy to operate.
- Machine adopts Stainless Steel 304/316.

**Data sheet:**

Capacity	pcs/h	18,000-23,000
Volume	ml	0.5-5g
Filling Accuracy	%	<±2
Film	thickness	PVCPE (0.15mm)
Tank volume	liter	50
Working air pressure	Mpa	≥0.6
Air consumption/minute	m3	1.5
Water Consumption/H	kgs	50 (Recycling)
Total power	KW	9.7
