

JXP-150 Automatic Glass Bottle Gripping Washing Machine

This machine is a combination of my company's many years of experience in the production of liquid production line, with the advantages of similar models at home and abroad, and developed under the technological requirements of customers. Suitable for glass bottles and high strength plastic bottle blowing cleaning. According to user needs, change a small number of specifications can be used for different diameter, height of the bottle. It suitable for food, medicine, cosmetics and chemical products purge.

The machine is mainly composed of bottle-clamping belt, conveyor belt and two-water-two-gas cleaning unit. It can be composed of automatic production line of liquid with oven, filling machine and other single machines, and can also be used for bottle washing alone. The glass bottle is fed into the conveyer belt by the clamping bottle belt and flipped into the washing system. After the water is pressurized and rinsed by the sanitary pump, the washing process is performed and the syringe tube is inserted into the bottle cavity to clean the air and complete the water vapor cleaning Process. This machine has the specifications of easy to replace, wash the bottle of good quality and so on.

This machine is suitable for different shapes of packaging containers glass bottles, plastic bottles and irregular-shape bottles. It is a new type of bottle cleaning equipment designed and developed by our company to digest and absorb the advanced equipment of the same kind in foreign countries. The biggest advantage of it is that it is easy to change the bottle shape without changing the parts, and the broken bottle rate is low for containers of different specifications. The main purchased parts like motor, clip bottle chain and so on are imported components, speed control using Schneider inverter speed, easy operation, simple and reliable maintenance. It is the ideal ancillary equipment for beverage, canned food industry production line.

Note:

1. Can be used to clean wide mouth bottles, plastic buckets, glass bottles and other relatively large caliber or larger bottle, or more complex variety of bottles, easy to adjust.
2. Can be used to handle unscrambling bottles machines, filling machines and other equipment to connect universal bottle washing machine, the use of the bottle.
