

## ***NBR-570 Fully Automatic Paper-Plastic Liner Blister Packaging Machine***

The equipment can automatically complete Blister forming, Blister Die cutting, Blister transiting, paper-card dropping, heat sealing, and output delivery and other functions.

### **Features:**

This equipment is the new equipment which is developed by our technical department based on the mature technology from pharmaceutical packing machinery of more than 20 years, and absorbing the working principle of similar machine abroad. It has the feature of man-machine interface, PLC control, encoders, touch screen operation, automatic counting, adjustable stroke, accurate, convenient and frequency conversion infinitely adjustable-speed, machine operation is stable, can apply various size specifications of the paper packaging, easy to operate, durable, clean, and equipped with safety emergency stop device to ensure the emergency measures in production, increase the operation safety factor, is the most ideal packaging equipment at present.

### **Technical and quality standard requirements:**

1. The working efficiency of the equipment is set at more than 15 modules/min. The replacement of feeder, template and other parts of the same specifications will not affect the accuracy of the equipment, and ensure the stable operation of the equipment to meet the production process and technical requirements.
2. This equipment adopts haoliwang oil-free self-lubricating vacuum pump made in Japan, and adopts imported cylinders and electrical components to increase the stable performance of the equipment.

3. The equipment is equipped with the detection functions of PVC fragment, sheet finish and paper card.
4. This device uses man-machine interface and PLC control system, and is equipped with counting, starting code, fault warning (warning light), maintenance warning (warning light) and other functions.
5. Convenient cleaning residue.
6. Each manipulator to ensure the correct placement of the tool.
7. Party A shall provide party B with paper Cards, sheets, products and other raw materials for machine testing.
8. Spare parts, accessories and special tools are provided at random. The quantity is provided according to the packing list.

### Application:

It is suitable for paper plastic packaging for daily product , stationery, hardware, cosmetics, lighting bulbs and other paper-plastic packaging. such as: battery, toothbrush, injection, lip balm, pen, glue, socket, bearing, and other industries, so as to improve product grade.

### 主要技术参数

#### Main technical parameters

最大冲裁速度 Max.Cutiing Speed	17-25次/分 times/min
塑材最大成型面积 Max.Forming Area	480x200mm
最大纸卡面积 Max.Paper-card Size	570x200mm(200g-700g)
进给行程可选范围 Adjustable Pulling Length	40-200mm
最大成型深度 Max.Forming Depth	40mm
电源/总功率	380v 50Hz 12Kw
耗气量	≥1m <sup>3</sup> /min
外形尺寸Overall Dimension	5000x1100x2000mm(LxWxH)
整机重量 Weight	2500KG
