

## *Electronic Counting Machine DJL-16*

### **Features**

1. Strong compatibility: It can count and bottle various kinds of solid preparation or solid granules such as tablet (including special shape tablet), capsule, softgel (transparent and non-transparent), pill, etc.
2. Filling by vibration: By the vibration, the material is moving evenly in the channels, and with the patent-owned turning plate structure, the separation and filling process is even and steady, protecting well the material.
3. Effective anti-dust: Adopting the anti-dust photoelectric sensing technology developed by ourselves, the machine also can work stably under the high dust circumstance.
4. Precise counting: Counting with automatic photoelectric sensor, the error of bottling is less than national standard.
5. Special structure of the discharge spout can prevent drug blocking. Even small spout bottle can be filled fast (optional)
6. High intelligence: It has various intelligent alarm functions such as no counting without bottle, automatic fault checking and so on.
7. Easy operation: Adopting intellectualized design, all kinds of operation parameters can be set according to the requirement. It can store 10 groups of set parameters for use.
8. Convenient maintenance: After simple training, the worker can operate easily. It is easy to disassemble and clean the machine, and change the components without any tools.
9. Hermetic and dust proof: Dust collection box is available which can reduce the dust pollution. (Optional)

**Technical Parameter:**

Applicable bottle shape	Round and square bottle (10~500ml)
Filling material	Φ0~5# capsule, softgel, Φ5.5~12 compressed tablet & special-shaped tablet, sugar coated tablet, Φ3~12 pill
Production capacity	20-80 bottles /min., (Depending on the bottle size, filling quantity in each bottle and the material specification)
Bottling volume range	1~9999
Power supply	AC220V 50Hz 0.6kw
Accuracy rate	>99.5%
Air pressure	0.6Mpa
Overall dimension	1360×1350×1650mm
Weight	420KG
