

Cosmetic Bottle Filling Machine RTCF-2

Cosmetic Bottle Filling Machine is controlled by a servo motor and is mainly used for high-viscosity creams and skin care products. Most of the pneumatic components use famous brand advanced products. The cylinder in contact with the liquid is made of 316 stainless steel, which has good wear resistance, high stability, low failure rate and guaranteed quality. This machine has good accuracy, high standard, high stability, and the parameters of the whole machine are higher than the industry standard.

Description

Cosmetic Bottle Filling Machine suits cosmetics, food, industrial oil, paste, shampoo, hair conditioner, laundry detergent, shower gel, sour milk, cream, cooking oil, industrial oil, etc. It is mainly used for high-viscosity creams and skin care products. Its structure is simple, achieving flexible and stable operation, easy and fast adjustment. It can operate in combination with various devices to achieve a series of manufacturing. It adopts human-machine interface, so the operation is done on the touch screen to set the product parameters.

Feature:

1. Easy to adjust, the valve switch adopts mechanical connection, which is not affected by air pressure, and the cylinder adopts snap-type quick connection, which is easy to clean;
2. Suitable for bottles with Noguchi and high viscosity requirements;
3. Fast filling speed, servo filling, high filling accuracy, +/-lg deviation, independent control of two cylinders, independent adjustment of capacity;
4. Double nut, reduce the tightening time, ensure the tightness of each nut, and the tightening force is adjustable.

Technical data:

Product model	RTCF-2
Product name	Funnel - Type High - Speed Automatic Cosmetic Filling Machine
Working voltage and power	220v AC 50Hz 1.7KW
Length,width and height	300*68.6*156.8cm
Weight	350kg
Filling speed	30-50 bottles/minute
Filling capacity	30-200ml
Material	304/316 stainless steel
