

Automatic Hot Chili Sauce Bottle Filling Machine CK-GT4T-4G

This automatic chili sauce filling machine is a kind of full automatic filling machine specially developed by our company for various sauces, intelligent elements are added to the control system, which can be used to fill sauce products with high concentration, no leakage, clean and tidy environment.

Compared with the traditional filling machine, this hot sauce bottle filling machine is more widely applicable, more professional, and saves labor, improves production efficiency, and can bring greater production benefits to the enterprise.

This automatic sauce filling machine adopts the pneumatic principle of piston cylinder, which is suitable for filling tomato sauce, pepper sauce, chili sauce, peanut butter, sesame sauce, jam and other viscous sauces and thick sauce. Filling rotary valve can be customized according to the customer's material, in order to adapt to different customer's material filling requirements.

The chili sauce filling machine is equipped with horizontal mixing hopper, which can ensure that the material is uniform in the filling process to the greatest extent, and no stratification occurs, ensure the filling accuracy of each glass bottle. The automatic sauce filling machine is designed to shorten the distance between the lower hopper and the filling head, and to overcome the disadvantage of uneven filling of materials with large oil content in the filling process.

Hot Sauce Bottle Filling Machine Features:

- ◎ The machine in reference to the same products at home and abroad on the basis of improved design, special sauce filling head, in the filling process will not pollute the bottle mouth or bottle body, easy to screw cap and label.
- ◎ The automatic sauce filling machine is more simple and convenient in operation, precision error, installation adjustment, equipment cleaning, maintenance and other aspects.
- ◎ The machine design is compact and reasonable, the appearance is simple and beautiful, filling volume adjustment is convenient.
- ◎ This machine has 4 filling heads, two cylinders drive, filling materials faster and more accurate.
- ◎ SUS304 stainless steel material is used in the contact part of the material. The patent SUS304 stainless steel enlarges the diameter of the rotary valve 40*60, which ensures the filling of the material with large particles. The chili sauce filling machine has wide applicability. A machine can fill a variety of materials, saving the purchase cost.

The number of filling heads of this automatic sauce filling machine can be customized according to the needs of customers, the more filling heads, the higher the price, but all the machines with factory price, there is no intermediate cost, there is no agent.

Model	CK-GT4T-4G
Voltage	220V 50/60Hz
Air Pressure	0.5-0.7Mpa
SS Material	SUS304
Piston Material	PTFE
Main Cylinder	SMC(Japan)
PLC&Screen	Delta
Filling Volume Range	100-1000ml
Filling Heads	4
Filling Speed	16-20 Bottles/Min
Machine Size (L*W* H)	2000*1050*1900 mm
Weight	350Kg
