

Juices Filling Production Line RCGF24-24-8

Application: juice, milk, vitamin drinks, a functional beverage with particles, flesh, pulp, fruit pieces, etc.

Full filling avoids the bottle distorted after cooling and reduces dissolved oxygen at the maximum degree. Product storage hopper and feed system adopt reasonable product feed design (constant flow, constant pressure, no foaming). Product hopper with reasonable structure (exhaust, fully close, the temperature can be detected). medium and high-speed line adopts product distributor instead of the large liquid carousel, which can be cleaned completely by pressure cleaning with CIP. Sanitary filling valve system umbrella-flow type structure, high speed. perfect hot filling temperature control system. Product recycle tank system with automatic product feed startup. perfect CIP system.
