

JFP-110A Capsule Polisher Machine with Sorter

JFP-110A capsule polisher with sorting function is is an automatic polishing machine for capsule with sorter. It can not only remove the dust on the surface of the capsule to improve smoothness and eliminate static electricity, but also it can take advantage of neoteric waste rejecting device with negative pressure to automatically reject the capsule which has small filling volume, empty shell, fragment, and separation of capsule body and capsule cap. The machine is suitable for all types of capsules. All parts of this machine adopt fast connection devices, and they can be dismantled for cleaning and connected quickly, which is very convenient and quick. The machine adopts frequency converter to adjust the speed, making it more sensitive, reliable, and stable. Moreover, this machine can bear larger starting torque. The output power of the synchronous belt achieves its operation with lower noise. The dedicated product feeder is equipped to connect with the automatic filling machine for usage. The whole machine is made of 304 stainless steel, which fully meets with the GMP standard.

Technical parameter

Production capacity	150000 Pcs/hr
Power supply	220V 50Hz, 2A, Single phase
Gross weight	69kg
Net weight	40Kg
Negative pressure	2.7m3/mn0.014mpa
Compressed air	0.25m3/min 0.3mpa
Overall dimension (L*W*H)	1150*550*800 (mm)
	960*720*650 (mm) Ordinary packing
Packing size (L*W*H)	960*620*850 (mm) Bubble packing
