

### De-nester and Re-nester for Syringes and Cartridges

The **SDN** Series is designed for denesting nested syringes or cartridges before in-line downstream processing.

The system carefully removes the syringes/cartridges from each tub and nest, and then place the emptied tubs and nests in their respective stacks.

The main features of the **SDN** Series are:

- Precise handling of syringes/cartridges
- Automated tub and nest handling
- Convenient operation with touch screen
- Secure and efficient recipe management
