# Pallet Slab Collector / Dispenser

## Pallet Dispenser

Premier Tech Chronos (PTC) pallet dispensers are dependable and rugged, yet gentle to pallets. The all-welded frame is made from rigid structural steel. Smooth lifting power is provided by PTC's 2000-pound capacity scissors lift, which features a sealed, self-contained power pack for maximum dependability.

Pallets are dispensed from the bottom of the stack one at a time and are never forced or rammed from the unit. In operation, the weight of the entire stack is relieved from the lowest pallet before it is released onto the discharge conveyor. Full-height guides on three sides of the magazine maintain a straight, square pallet stack for reliable feeding. Flexibility is designed into the system with machine configurations available to handle two, three or more different pallet sizes with minimal adjustment, or units with multiple pallet bins to handle several types of pallets at one time. The pallet dispenser can be designed for side or rear loading. It handles virtually any size or type of pallet.

## Pallet Slab Collector / Dispenser

Premier Tech Chronos slab pallet collector / dispenser is used to collect and dispense single empty, solid pallet slabs to and from a stack of empty pallets.

Slabs are dispensed from the top of the stack. Movement of the pallets is done through the use of an overhead scissors lift gantry, and a self generated low vacuum lifting cup. No air is required

### Examples of Available Alternatives

- End tooling to handle standard pallets or specific applications
- Custom configured to fit specific layouts and footprints.
- Special paint colors can be accommodated.
- Conveyor systems to meet specific application
