

NJP-400 High end, Touch screen Automatic Capsule Filling Machine

Introduction:

1. NJP-200/400 is currently the smallest type of automatic capsule filling machine in China.
2. The equipment adopts eight-station intermittent separator to operate, which has low noise, high precision and stable operation.
3. Strong adaptability to capsules, high probability, suitable for filling western medicine, Chinese patent medicine, Chinese herbal medicine.
4. Fully enclosed modular rotary table, ultra-low work station design and smooth operation, and facilitate mold replacement and cleaning.
5. The material fling mechanism adopts the principle of hole plug, and the dose accuracy and volume difference are better than those stipulated by the national pharmacopoeia.
6. Man-machine safety protection device, with the function of automatic alarm stop for lack of capsule, medicine and gate control.
7. The unique design principle can complete the mixing and filling device that adds different drugs in the same capsule.
8. The equipment is small in size, high in precision and easy to operate, which is the preferred product for hospitals, scientific research and teaching institutions.

Specifications:

Model	NJP-400C
Productivity	24000 capsules/h
Applicable capsules	00#, 0#, 1#, 2#, 3# ,4#, 5# machine-made standard capsules
Filled medicine type	Not adhesive or wet powders and small granules
Total power	3Kw
Number of holes	3
Vacuum	20m ³ /h -0.04-0.08Mpa
Aspiration	17.6Kpa 180m ³ /h
Compressed air	3m ³ /h 0.3-0.4Mpa
Working noise	<75DB(A)
Load precision	±3%
Dimensions(mm)	1000X710X1900 (LXWXH)
Weight	600KG
