

## *SX-400T Automatic Transparent Three-dimensional Packing Machine*

Automatic transparent film three-dimensional packaging machine is suitable for medicine, health care products, food, cosmetics, tobacco and other industries. It is a new generation of ideal product packaging machinery as a bundle packaging of small boxes instead of medium boxes, especially for drugs and health products with high quality packaging requirements. Transparent packaging technology is one of the packaging methods in the market.

### **Feature:**

1. Automatic feeding, conveying, stacking, wrapping, forming, sealing, counting, etc.
2. The machine can not only be used independently, but also form an automatic production line with the laser code printer and box loading machine.
3. The folding angle packaging is used to make the packaging more perfect and improve the anti-counterfeiting ability of the packaged goods.
4. In the process of packaging, when the small box is supplied, it can start up automatically; when there is no small box, it will stop automatically.
5. The operation is simple. Different packaging forms can be adopted according to the needs of users, and the size can be adjusted arbitrarily within the packaging range.
6. The measuring instruments and meters shall be those conforming to the legal unit of measurement.
7. The machine has compact structure, advanced performance, stable operation, high efficiency, energy saving and stepless speed regulation.

**Technical Parameter:**

Packing speed	10-35 pcs /min
Packing size	Length(400-80)×Width(280-40)×Height(120-30)(mm)
Wrapping film and thickness	0.021-0.028mm BOOP smoke film, PVC etc.
Inner diameter	Φ75mm
Film width	based on the dimensions of product size
Sealing temperature	100-150°C
Voltage supply	3phase 4wires 50HZ/AC380V
Power supply	3.5KW
Air pressure	0.3-0.6MPa
Machine weight	600KG
Machine size(L*W*H)	1900*970*1250mm
