

## Capsule Polishing Machine JFP-110

Made of 304 Stainless Steel, the JFP series capsule polishing machine has a dual function of capsule polishing and lifting. With a focus on ergonomics and clean ability, our engineers have developed a cGMP-compliant machine type that minimizes cleaning time and thereby maximizes its productivity. For example, the bayonet-locked brush in the roller can be easily disassembled and cleaned thoroughly; the motor speed is controlled by the frequency converter, which can bear a larger starting torque, hence a more balanced and reliable operation. Besides capsule polishing and static eliminating, it is able to automatically sort out capsules of all sizes that are insufficiently dosed, empty, fragmented, and/or uncoupled.

### Specification

Model	JFP-110
Power supply	220V/50Hz
Power	180W
Max. productivity	150000(Capsules/hour)
Vacuum dust clearing	2.7 m <sup>3</sup> /min-0.014Mpa
Compressed air (prepared by yourself)	0.25 m <sup>3</sup> /min 0.3Mpa
Overall dimensions	1000 x 600 x 950mm
Weight	43Kg
